Common Patters in Python

Test argument is file and read

This program takes an argument, tests that it is a file, and then reads it. It's basically cat.

```
$ cat -n read_file.py
1 #!/usr/bin/env python3
2 """Read a file argument"""
3
4 import os
5 import sys
7 args = sys.argv[1:]
9 if len(args) != 1:
       print('Usage: {} ARG'.format(os.path.basename(sys.argv[0])))
10
       sys.exit(1)
11
12
13 filename = args[0]
14
15 if not os.path.isfile(filename):
16
       print('"{}" is not a file'.format(filename), file=sys.stderr)
       sys.exit(1)
17
18
19 for line in open(filename):
       print(line, end='')
20
```
